

# ORGANIC LABELING *and* COMPOSITION GUIDE

IF YOU WANT TO CLAIM:

## LESS THAN 70% ORGANIC

(OR SIMILAR STATEMENT)

<sup>1</sup> To identify an ingredient as organically produced, in the ingredient statement use the word "organic" in conjunction with the name of the ingredient, an asterisk, or other reference mark defined below the ingredient statement.

<sup>2</sup> Your product could contain any amount of organically produced ingredients. However, the product is limited to this label category if materials not listed on 205.605 are used.

Note: a product certified in this category and containing less than 70% organic ingredients can be used as an ingredient in a manufactured product making and organic or made with claim as long as the non-organic ingredient portion is allowed in that organic or made with product category. If the less than 70% organic product is certified by an accredited certifier, the organic content of the product can be used to count toward the product composition requirements in the higher category.
